

## Project Manager Operations

### Who we are.

At Bnewable, we are committed to supporting our Commercial and Industrial (C&I) customers in their energy transition journey. We invest, develop, and operate sustainable and decentralised energy sources (mainly batteries) to help our clients achieve their goals. We place great emphasis on customer satisfaction, by simplifying and unburdening them of the complexity of energy, storage, production, asset management and flexibility valorisation.

To help us get there we are actively looking for a **Project Manager Operations** to join our operations team, taking on a crucial role in the development of complex energy projects that will elevate our customers' energy transition to the next level.

### Your responsibility.

As **Project Manager Operations** at Bnewable, you will:

- manage the project cycle from start to finish with a strong focus on technical feasibility and implementation and ensuring the highest quality and reliability standards.
- run several projects in parallel that are in different development stages.
- lead the design for the integration of battery energy storage systems for a seamless installation of the Bnewable proposition within the customer site.
- challenge and work both during the design and building phase (including site visits) with electrical / EPC contractors on the required electrical equipment including battery modules, inverters, transformers, mid / low voltage panels and protection systems.
- act as the primary technical contact for project-related technical studies, collaborating with DSO and TSO on orientation and detailed studies.
- gather and bundle the required data for permitting purposes. Submit and follow up of the permit application with external consultants.
- check and finalize quotes for hardware procurement. Follow up on delivery times.

As a true entrepreneur at heart, you'll be part of a dynamic and fun-loving team that values passion, play, and customer-centricity.

## Your profile.

To be successful in this role, you'll need to:

- have a strong background (degree or work experience) in electrical engineering. Work experience in the energy industry is a plus.
- demonstrating proficiency in working with single-line diagrams and the ability to swiftly analyze the electrical configuration of an industrial site. You are able to quickly identify opportunities and troubleshoot the hurdles during the different project phases.
- strong project management skills and the ability to manage multiple projects simultaneously.
- be a great communicator, possess interpersonal skills, and can motivate people.
- being first point of contact of external stakeholders regarding the battery project does not scare you.
- you like to go on site when necessary during design and development of the battery project. You have a drivers licence.
- native fluency in Dutch and/or French and work proficiency in English, both oral and written.
- nice to have: Working knowledge of communication and network protocols (e.g. Modbus TCP/IP)
- have a good dose of common sense and a focus on delivering results and meeting deadlines. You get things done.

## But the best part? We're not just a company!

Bnewable is a rapidly growing renewable energy company and offers you a chance to grow with us by taking on a key role in making the energy transition happen.

We are a team of passionate energy experts who are eager to help and learn from our team members and to collectively grow as a team. We are committed to fostering a diverse and inclusive work environment, where everyone is encouraged to express themselves. We take care of our people by offering competitive compensation packages that reflect your worth and potential, combined with flexibility through our hybrid working policy, giving you the trust and freedom to manage your projects and responsibilities.

## Employeneurship at Bnewable

Not just as a word but as a way of working, a paradigm even.

Employeneurship is about thinking and acting like an entrepreneur, with the added security of employment. But more than anything, it is a guarantee for continuous development and the opportunity to really be fully responsible for the direction of your career.

## (Y)our values.

# B.

Authentic and result driven.  
We bring passion to the game, it's contagious.

# new.

Proud to challenge the market. The status quo won't transform the energy system.  
We are humble and resilient.

# able

Collaboratively with a no-nonsense attitude.  
Bringing clarity and reliability to our customers.

## So, what are you waiting for?

If you like what you read and you have **#goesting** to join the Bnewable team and contribute to our story, please reach out by sending your CV and let's make a difference together.

Can't tick off all the talents but still feel the itch? Then be sure to apply! A match is a match, and sometimes more important than a list.

Cheers,  
The Bnewable team or #Bnewies!
